

CLAIMS

What is claimed is:

1. A decoration article secured to the ends of an upper beam of a Venetian blind, mainly made up of a decoration unit, and a fixing mount wherein the decoration unit includes a retaining tube disposed at one side thereof, a screw locking hole matching to a screw disposed at the upper side of the retaining tube thereof, and a decoration piece disposed at the other side thereof; the present invention being characterized by that,

—the fixing mount having a horizontal contact plate disposed at one side thereof, two fixing holes matching to two fixing members equidistantly disposed at the horizontal contact plate thereon to attach the horizontal contact plate onto the ends of an upper beam of a Venetian blind therewith, a connection plate extending vertically downwards at one side of the horizontal contact plate thereof, and a coupling tube protruding transversely at the lower section of the connection plate thereof to be engaged with the retaining tube of the decoration unit for location thereof;

—thus, a blind fabric of various materials such as silk or lace, chosen according to the favor and taste of the users, can be collected around the coupling tube of the fixing mount and held thereto to form a wavy arc pattern at the front side of the Venetian blind thereof and suspend regularly downwards in wavy folds at both sides thereof for further decoration thereof, visually increasing the overall beauty and the artistic texture of the Venetian blind in display, and also economically boosting the benefits of the Venetian blind thereof in the market.

2. The decoration article secured to the ends of an upper beam of a Venetian blind as claimed in Claim I wherein the fixing mount can be made of metallic

materials.

3. The decoration article secured to the ends of an upper beam of a Venetian blind as claimed in Claim I wherein the coupling tube of the fixing mount is shaped a hollow tube.

4. The decoration article secured to both ends of an upper beam of a Venetian blind as claimed in Claim I wherein the fixing mount is secured to the lower side at the ends of a wooden or plastic upper beam thereof respectively.

5. The decoration article secured to both ends of an upper beam of a Venetian blind as claimed in Claim I wherein the fixing mount is turned in 180 degree to be secured to the upper side at the ends of a metallic upper beam thereof.
